

WHAT IS CLAIMED IS:

1. An electrophoretic display, comprising:
  - a first substrate disposed on a viewer side,
  - a second substrate disposed at a
  - 5 predetermined spacing with said first substrate,
  - a first electrode disposed on said first
  - substrate side,
  - a second electrode disposed on said second
  - electrode side,
  - 10 liquid disposed at the predetermined spacing,
  - and
  - a plurality of charged particles dispersed
  - in the liquid, said charged particles being movable
  - by changing a polarity of a voltage applied between
  - 15 said first and second electrodes to effect display,
  - wherein said second electrode at a pixel has
  - a surface area larger than that of said first
  - electrode at the pixel.
- 20 2. A display according to Claim 1, wherein said
- each pixel has an inner wall which has been
- substantially covered with said first and second
- electrodes.
- 25 3. A display according to Claim 1, wherein said
- first electrode is divide for a pixel.

4. A display according to Claim 3, wherein said first electrode is connected to an associated switching device for the pixel.

5 5. A display according to Claim 1, wherein said second electrode is divided for a pixel.

6. A display according to Claim 5, wherein said second electrode is connected to an associated  
10 switching device for the pixel.

7. A display according to Claim 1, wherein said charged particles and said liquid are held in a microcapsule.  
15

8. A display according to Claim 1, wherein an insulating layer is disposed at the surfaces of said first and second electrodes.

20 9. A display according to Claim 1, wherein said second electrode has a pan shape in a vertical cross section.

10. A display according to Claim 9, wherein the  
25 pan space is such a shape that the charged particles are surrounded by said second electrode when they are moved toward said second electrode.
